

SRIVATSA S POOJARI

Linux Systems | Infrastructure | Networking

Udupi, Karnataka, India | srivatsapoojary@gmail.com | github.com/Haschwalth00B | haschwalth00b.github.io

SUMMARY

BCA student graduating in 2027 with hands-on experience building Linux infrastructure, declarative NixOS systems, containerized services, virtualization labs, and networking projects. Currently developing a multi-region network fabric with Containerlab and FRRouting, working through BGP, OSPF, MPLS, and IPsec-based connectivity.

TECHNICAL SKILLS

Languages: C, C++, Python, Bash

Operating Systems: NixOS, Arch Linux, Debian, Ubuntu, OpenBSD

Networking: TCP/IP, DNS, DHCP, VLANs, routing fundamentals, network troubleshooting; hands-on with FRRouting, BGP, OSPF, MPLS, VRFs, strongSwan/IPsec via personal infrastructure projects

Systems: Linux administration, SSH, basic TLS/SSL

Virtualization & Containers: Proxmox VE, QEMU/KVM, Docker, Docker Compose, Portainer

Infrastructure & Tooling: Nix Flakes, Git, GitHub, Nginx, systemd, Pi-hole, Tailscale, Samba

Monitoring: btop, smartmontools, systemd journal

SELECTED PROJECTS

Spare Box — Network Fabric & Infrastructure Lab

2026 – Present

- Building a multi-region simulated network fabric on bare-metal NixOS using Containerlab and FRRouting, with BGP and OSPF routing configured across three regions.
- Configured strongSwan/IPsec transit tunnels between regions and Worked with MP-BGP VPNv4 and route segmentation as part of the network-fabric project.
- Troubleshot route-target import/export behavior, VRF configuration, and MPLS forwarding within containerized network nodes.
- Planning to extend the project with a k3s-based platform layer incorporating GitOps, observability, and chaos-testing components.

NixOS Declarative Home Server

2024 – Present

- Built a fully declarative NixOS server using Nix Flakes, version-controlling packages, services, and system configuration across 14 purpose-built modules covering boot, networking, security, power management, and virtualization.
- Layered Home Manager for declarative user-environment management and configured fail2ban for SSH hardening.
- Tuned ASPM/power-management settings for 24/7 headless operation and automated weekly upgrades and garbage collection through NixOS configuration.

Self-Hosted Infrastructure

2023 – Present

- Deployed and maintain 8+ containerized services via Docker Compose — including Immich, Home Assistant, n8n, and Pi-hole — managed through Portainer.
- Configured Tailscale for remote access and Samba/Avahi (mDNS) for local file sharing and service discovery.

Proxmox VE High-Availability Cluster

Personal lab project

- Configured a multi-node Proxmox VE cluster to experiment with VM live migration and HA/failover behavior across physical nodes.
- Set up Chrony/NTP synchronization across cluster nodes while working with QEMU/KVM virtualization.

EDUCATION

Bachelor of Computer Applications (BCA)

2024 – 2027 (Expected)

NSAM First Grade College, Nitte University — Udupi, Karnataka | GPA: 7.9/10

Relevant coursework: Computer Networks, Operating Systems, Data Structures, DBMS, C, C++, Python

CURRENTLY LEARNING

AWS Cloud Operations — preparing for AWS Certified CloudOps Engineer – Associate
