

SRIVATSA S POOJARI

Infrastructure Engineer · BCA Student, Class of 2027

srivatsapoojary@gmail.com · Udupi, Karnataka, India · github.com/Haschwalth00B · haschwalth00b.github.io

PROFESSIONAL SUMMARY

Infrastructure engineer with hands-on production experience in NixOS, containerised services, network security, and high-availability virtualisation. Designed, deployed, and actively maintain a fully declarative home server running 8+ self-hosted services — entirely version-controlled as code using Nix Flakes. Open-source contributor to nixpkgs. Currently studying cellular network fundamentals. Seeking a Systems Engineering or Infrastructure internship.

TECHNICAL SKILLS

Languages	C · C++ · Python · Bash
Operating Systems	NixOS · Arch Linux · Debian · Ubuntu · OpenBSD
Virtualisation	Proxmox VE · QEMU/KVM — HA clustering, live migration, failover
Containers	Docker · Docker Compose · Portainer
Networking	TCP/IP · DNS · DHCP · VLANs · pfSense · Pi-hole · Tailscale
Protocols	HTTP/S · SSH · TLS/SSL · mDNS/Avahi
Monitoring	Netdata · btop · smartmontools · systemd journal · custom Bash alerting
IaC & DevOps	Nix Flakes · Git · GitHub · Nginx

PROJECTS & TECHNICAL EXPERIENCE

NixOS Declarative Home Server

2024 – Present

- Fully declarative NixOS server using Nix Flakes — every package, service, and system option is version-controlled; a clean rebuild produces an identical system every time.
- 14 purpose-built config modules (boot, networking, security, power, monitoring, virtualisation, etc.) plus a Home Manager layer managing the entire user environment declaratively.
- Configured fail2ban SSH hardening, ASPM power management on 24/7 headless hardware, and automated weekly upgrades and garbage collection via NixOS options.

Self-Hosted Service Infrastructure

2023 – Present

- 8+ containerised services in production via Docker Compose: Immich (AI photo management with ML face recognition), Home Assistant, n8n workflow automation, Pi-hole DNS, and more.
- Nginx reverse proxy with automated Let's Encrypt TLS rotation — single ingress point routing HTTPS to all internal services; zero open ports on the public internet.
- Tailscale overlay VPN for secure remote access; Samba + Avahi for local file sharing and mDNS discovery. Custom Bash/systemd alerting for container health; Netdata for real-time metrics.

High-Availability Virtualisation Cluster

2023 – Present

- Proxmox VE HA cluster across multiple physical nodes with live VM migration and automatic failover — validated under induced hardware failure scenarios.

- Evaluated Ceph vs NFS for clustered shared storage; documented latency tradeoffs and selected NFS for lab constraints with awareness of production-scale implications.
- Deployed Chrony NTP synchronisation across all nodes to prevent split-brain conditions in the clustered environment.

Network Security & DNS Filtering

2023 – Present

- Deployed Pi-hole as a recursive DNS resolver — reduced unwanted DNS traffic by ~40% across all LAN clients; analysed query logs with Python to surface anomalous traffic patterns.
- Deployed and configured a pfSense firewall in a home lab environment to manage network traffic, NAT, and basic access control rules.

EDUCATION

Bachelor of Computer Applications (BCA)

2023 – 2027

Nitte University, NSAM First Grade College · GPA: 7.9 / 10.0

Coursework: C · C++ · Data Structures · Computer Networks (LTE/5G) · Operating Systems · DBMS · Python

Pre-University (CEBA)

2024

Viveka PU College, Kota · Score: 90%

CERTIFICATIONS & ACTIVE LEARNING

- AWS Cloud Practitioner / DevOps — in progress (target: mid-2025)
- Active nixpkgs contributor; engaged in NixOS community
